A Field Guide to Identifying Woods in American Antiques Collectibles

R. Bruce Hoadley : A Field Guide to Identifying Woods in American Antiques Collectibles before purchasing it in order to gage whether or not it would be worth my time, and all praised A Field Guide to Identifying Woods in American Antiques Collectibles:

4 of 4 people found the following review helpful. Extraordinary!!By AnonymousAn exceptional resource for anyone interested in antiques, wood products or objects and learning how to identify wood, written for a general audience. It is an indispensable tool for curators, collectors, antique dealers and countless other individuals, written in an accessible manner by the authority on North American wood anatomy and identification. It will doubtless be used by generations

of readers. 2 of 2 people found the following review helpful. Handy photo guide book By Karin Costa Beautiful book with color photos of wood types showing the grain and coloration up close. Not scientific testing to identify the wood.

Great reference for dealers, collectors and appraisers. 2 of 2 people found the following review helpful. A very complete book. By Customer Excellent pictures of the three different slices of each wood. Identifying woods is not a simple thing to do. So do not expect this book to make you an instant expert. It requires much practice.

A Field Guide to Identifying Woods in American Antiques Collectibles is the authority on wood identification.

Beginning with general information about the featured woods, the book then delves into hundreds of detailed photographs, even at a macroscopic level, depicting the critical characteristics used in identification. Ultimately, each wood is presented in two or more antique or collectible objects to illustrate the traits that confirm the wood's identification.

"A fascinating guide that is a perfect resource for everyone in the field." (Antiques and the Arts Weekly) About the Author R. Bruce Hoadley has a degree in forestry from the University of Connecticut and a doctorate in wood technology from Yale. He is a former professor of wood science and technology at the University of Massachusetts at Amherst. He frequently consults for museums and acts as an expert witness at trials. He is also the author of Understanding Wood (The Taunton Press, 1980, 2000) and Identifying Wood (The Taunton Press, 1990).
