How To Fix Your Own Clock

Richard Hansen : How To Fix Your Own Clock before purchasing it in order to gage whether or not it would be worth my time, and all praised [How To Fix Your Own Clock](#):

1 of 1 people found the following review helpful. A waste of moneyBy Wm. F.Only buy this book if you don't know how to wind your clock, or how to level it or how to hang it or - seriously - what does the pendulum do? I can only surmise that this author put this book together for people that can't figure out the most basic function of anything. You get what you pay for, and this book is cheap.1 of 1 people found the following review helpful. Some good instructions,

but not enough detail. By Jeff A. Winger I found the book to have a good amount of useful information, but it lacks details on more complex issues. If all you are looking for is some information on making minor fixes then this is a good book. If you need to get into the guts of the clock to determine a problem, or to even properly oil the clock, then this is not the best book. 0 of 0 people found the following review helpful. Good book, gives great ideas for owners to try ... By Alesa Good book, gives great ideas for owners to try themselves. Glad I bought it.

"How To Fix Your Own Clock" gives simple answers to basic minor problems that can be easily corrected by most clock owners. This book is written for the typical mechanical clock owner who knows little about clocks - and who doesn't want to run up a repair bill if it can be helped. The book is in an easy to understand question and answer format, and comes from actual questions from the author's newspaper column. The author, Richard Hansen (a master clock repairman and owner of his own clock repair business for 15 years), knows that often, a clock may need little more than the correct set-up, or a minor adjustment to go from "dust collector" in your attic - to "treasured and accurate timepiece" in your living room! He wrote this book so you can get your clock going - and keep it going - easily and inexpensively!

About the Author Richard Hansen is an electrical engineer who graduated from Auburn University. He worked for years in California in the Silicon Valley as a design engineer. After taking night classes in clock repair, the hobby interest in clocks he had developed over the years grew to become a career change. Richard is a second generation clock person (his father owned 800 clocks at one time). Since changing careers, Richard has taught beginning and advanced clock repair in California, Pennsylvania, New York, and Connecticut - to both amateurs and professional clock repairmen. For the last fifteen years, he has owned and operated a clock repair store in New York state.
