The training aid for the US Submarine fleet at the end of the Second World War, How to Pilot a Submarine gives us an idea of just what life was like underwater and the various tasks a submariner would have to do. Restricted and unavailable till now, How to Pilot a Submarine will teach you how to crash dive, how to maintain the engines and batteries of a World War Two submarine and, most importantly, how to fire the torpedoes and to deal with life underwater.

Amberley Publishing presents students, academics, researchers, and general interest readers with a reprint of a 1946 U.S. Navy training aid produced at the end of World War II, entitled . The manual is composed of twenty-one chapters divided into five sections focused on the history and development of the submarine, submarine construction, submarine systems, submarine operations, and submarine training. Individual chapters are devoted to compartmentation and exterior installations, tank arrangements, buoyancy and stability, and a wide variety of other related subjects.
